

Making The World Smaller

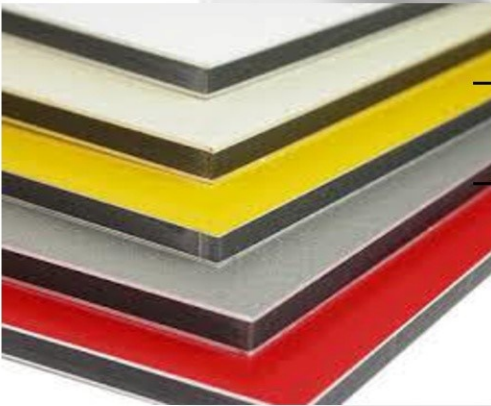

# Aluminum Composite Sheet

## ACP Sheet

Aluminum Composite sheet is a sandwich of two aluminum panels with a polyethylene core. This product because of its light weight and rigidity is highly used in the construction industry. ACP is a durable, flexible and low-weight product. ACP's forming and processing has allowed for much innovative design. Because of ACP's durability it is sought out in many industries with many creative designs. Durable and rigid, it has become a widely used product.
